Some properties of the gamma function:

$$\Gamma(n+1) = n\Gamma(n), n > 0,$$

and when  $n = \text{integer} > 0$ , we have  $\Gamma(n) = (n - 1)!$

The gamma function is related to the beta function,  $B(m,n)$ , as follows:

$$B(m, n) = \int_0^1 x^{m-1}(1-x)^{n-1} dx$$

$$B(m, n) = B(n, m) = \frac{\Gamma(m)\Gamma(n)}{\Gamma(m+n)}.$$
